The Lightning Strike

Concrete Placement system

No other screed system in the world does what the Lightning Strike does - Change to fit your needs! With a contractors package from Lura Enterprises you can go from 5 feet to 25 feet in just minutes, put on riser wheels for riding on existing slabs, change the pitch of the handle to easily do elevated slabs, add water for perfect Pervious compaction, all in minutes, and all with a system that will reduce the strain on your employees and make the pours and cement trucks line up faster!

Clevis Articulating Handle

Now standard on all gas motors, the pitch of the handle can now be adjusted to keep the motor upright on any level. Perfect for any raised slab or inclined pour.

Riser Wheels

Attached at both ends of the screed, these elevate the system 1/8" above the pour. Reduces wear, perfect for patching! Add the rings for 3/8 or 5/8.

*Riser Wheel Rings sold separately

The **Lightning Strike** has features the competition just can't match:

- 50cc Honda gas motor
- Pass through dual drive allowing screed tubes to be one left or right hand sides.
- Threaded-axle coupling system allows tubes to be extended or accessories to be attached.
- Made from rugged, construction grade aluminum.

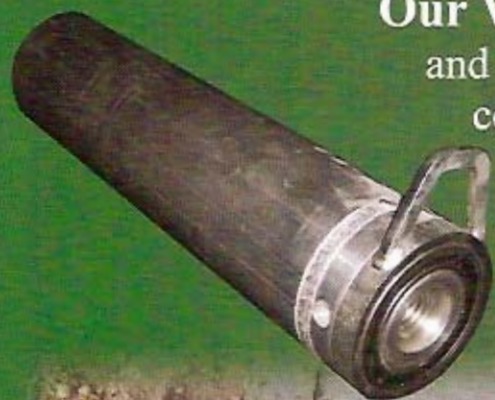

CV Joint

The perfect implement when running to drains or creating a peak in your slab. Pitch is set by how tightly the CV joint is threaded. Set a screed pipe to ensure proper level.

Our Wall Plugs come in lengths of 6" and 12" , both are standard with the contractors package and let you get right up against walls inside a foundation, or next to a house. These attach to the threaded male end of any screed section, and are where the handle is attached.

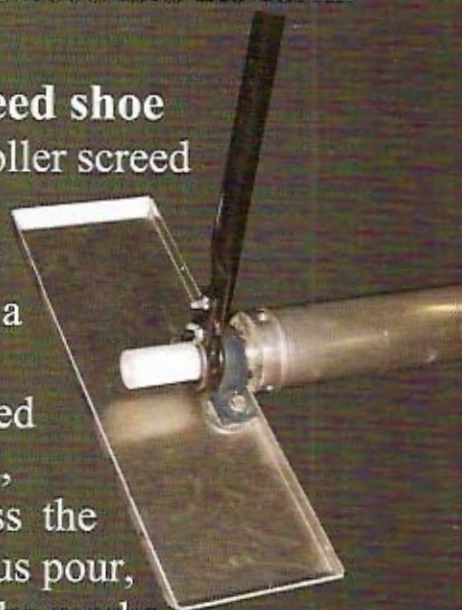

The Form Runner keeps your investment newer longer when riding on steel forms. Simply slide over any section of screed tube and it rides between the rotation of the screed and the form.

A Center Pin Pivot will get you centered for perfect circular pours. This accessory replaces the handle of the screed and is adjustable to both height and pitch, a must have for anyone who handles circular pours with any regularity.

With a wet-screed shoe you get the only roller screed that can float. Pouring bay after bay is no longer a concern, with the wet screed attached to the handle end, simply float across the top of your previous pour, and bull float out the marks

Emission Free Electric Motors for working indoors or anywhere else carbon monoxide would be a problem. The Single side and dual sided motors deliver all of the gas motors power from a 20 amp service. Call today to find out about close out pricing on the single sided motor!

THE LIGHTNING STRIKE

on

PERVIOUS CONCRETE

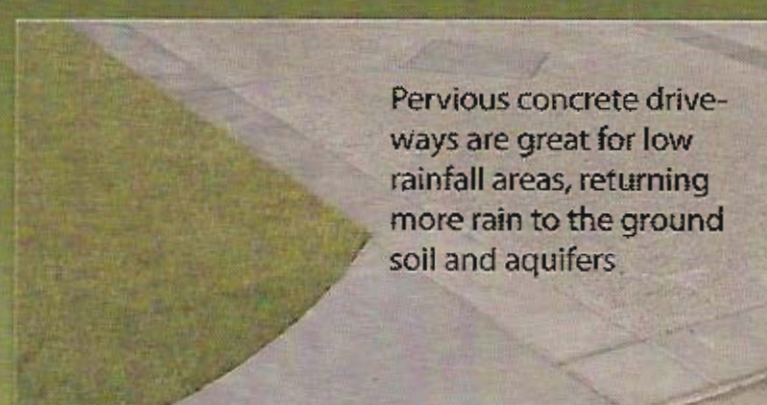

It's beginning to seem, that all the world is going green. And with the Lightning Strike screed system and it's line of pervious concrete finishing tools, you'll be able to grow your **green** business this year.

Pervious concrete, other wise known as "No Fines" or "Permeable" concrete, allows the flow of water through it, making it ideal for storm-water run-off control. Ideally it earns LEED certification points by letting builders move their retention ponds underneath their parking lots. This is achieved by placing the slab on top of a rock sub-base, leaving void space for water to run into, then filter naturally back into the ground soil.

Due to it's ability to be filled with water, the Lightning Strike is the ideal screed when planning for pervious placements. The aluminum sections weigh 4.5 lbs. per foot until filled with water, when they are just over 10 lbs. per foot, giving you ideal compressive weight.

The specialized compressive roller and jointer are also available from Lura Enterprises.

Pervious concrete driveways are great for low rainfall areas, returning more rain to the ground soil and aquifers.

Some of the staff at Lura Enterprises are certified pervious technicians, who have had experience on pervious concrete pours. We are happy to try to answer you placement questions as it concerns our products.

The Lightning Strike's contractor package allows concrete professionals all the power to do the job today and the versatility to face the pours of tomorrow. It includes the powerful and efficient 50cc Honda gas motor, screed section lengths of 20', 12', 6' and 3', both our 6" and 18" wall plugs, 2 riser wheels, 3 collapsible tri-pod set-up stands and the accessory tote. This package offers 18 length combinations and can span 32 feet with center support! From sidewalks to grain-bins to foundation floors, there's a Lightning Strike solution to your flatwork pours.

For circular pours, substitute a center pivot and form runner for the 2 wall plugs.

The Lightning Strike is Ideal for:

Exposed Aggregate

Up Hill - Down Hill

Circular Pours

Wet Screed

Pre-Cast

Pervious

Flat Work

Crowns - Cambers
